MEDICAL CERTIFICATE

This is to certify that I have been following up Mr John Dragonas (D.O.B 3/2/1955) since 1/6/2007 (either home or my office visits). It appears that despite treatment he still suffers from anxiety disorder with insomnia, tachycardia, palpitations, suicidal ideas, negative thinking and irritability. He was given a sort course of anxiolytic treatment as well as muscle relaxants with pain killers but so far didn't respond to that medication. In my opinion the patient needs continuing treatment and possibly an admission to a proper psychiatric unit for more intensive treatment for at least the next three to four months. Therefore at the moment he is unable to travel back to England and to attend and properly follow a court procedure.

MEDICAL REPORT

DRAGONAS IOANNIS

The above named patient was admitted urgently to our Clinic on ^{September} ~~October~~ 27, for left sciatic pain due to a large herniated disc of the levels L2-L3, L3-L4 with radiological image of severe pressure on the coda equina.

The clinical examination showed a left foot paresis almost plegia.

He was urgently operated in order to prevent further complications of the right foot as well as sphincter complications, due to the pressure on the coda equina. The clinical picture and radiological findings of the patient did not allow transportation abroad for his treatment.

He was operated where a fenestration of L2-L3, L3-L4 was performed and the L2-L3, L3-L4 discs were removed. Fusion has followed between the above levels and U prothesis between the spinal processes L2-L3, L3-L4 spaces. The use of titanium intervertebral implants was totally indicated and compulsory.

The outcome was excellent.

Avoidance of any physical effort for four months is recommended.

The present medical report is provided for any legal use.

ΙΑΤΡΙΚΗ ΒΕΒΑΙΩΣΗ

(8)

Βεβαιώνεται ότι ο ασθενής Δραγώνας Ιωάννης του Παύλου προσήλθε στο Ιατρείο Πόνου του ΙΓΝΑ την 27/3/2008 λόγω άλγους στην οσφύ με αντανάκλαση στο δεξιό κάτω άκρο. Ο ασθενής είχε υποβληθεί σε χειρουργική επέμβαση προ εξαμήνου λόγω διπλής κήλης στους μεσοσπονδύλιους δίσκους Ο2-Ο3 και Ο3-Ο4. Η αναφερόμενη συμπτωματολογία πιθανώς οφείλεται σε ανάπτυξη μετεγχειρητικών-συμφύσεων. Στον ασθενή χορηγήθηκε η κατάλληλη αγωγή και του συνεστήθη να παραμείνει κλινίης (σε ακινησία) επί μία εβδομάδα. Αμέσως μετά συνεστήθη επαγέλγος και έναρξη κινησιοθεραπείας.

Η ανωτέρω βεβαίωση χορηγείται για δικαστική χρήση

DIRECTOR OF THE CLINIC:
DR. NIKOLAOS MANOUSIS

KIFISSIA 09/ 12/ 2008

Dear Mrs Ravidran,

Mr John Dragonas, aged 53, admitted our clinic on the 7th of December after his private doctor suggestion.

He shows symptoms of depression, lack of interest, sleep disturbance connected with recent stressfull life events. Now he is under medication and surveylance.

We believe that he has to be given pychometric tests in order to have the final diagnosis. Due to his condition and his short stay in the clinic we are not able, for the moment, to evaluate his capability of understanding financial issues and give instructions.

We are not able for the moment to evaluate for how long the patient will have to be in the clinic. The prognosis of his condition will be determined after the final diagnosis.

Yours faithfully

NIKOLAOS MANOUSIS

MEDICAL CERTIFICATE

This is to certify that I have examined Mr John Dragonas -
D.O.B 3/2/1955 in my office today.
He showed signs of recovery of his illness such as improvement in the following
symptoms of headaches, dizziness, suicidal thoughts, depressed mood, insomnia and
agitation.
I advised him to carry on taking his regular psychotropic medication.
In my opinion Mr Dragonas is capable now to decide for himself.
I suggested that he stays under constant supervision.
I recommended that he avoids travelling abroad.
